

MSME Cyber Risk Self-Check - 20 Yes/No Questions

NITECHSPARK | Erode, Tamil Nadu | Udyam MSME registered

Mark Yes or No for each question. Be honest - this is for you, not for us.

	YES	NO
1. Do servers use SSH key login with password login disabled?	[]	[]
2. Is root login over SSH disabled?	[]	[]
3. Is a firewall on, allowing only the ports you actually need?	[]	[]
4. Are OS and critical packages patched within 30 days?	[]	[]
5. Is critical data backed up off-site and restored at least once this quarter?	[]	[]
6. Does someone other than one person know the backup restore steps?	[]	[]
7. Do you monitor uptime and TLS certificate expiry with alerts?	[]	[]
8. Does every person have their own account (no shared logins)?	[]	[]
9. Is MFA on for email, cloud consoles, DNS and hosting panels?	[]	[]
10. Is there a written access list (who can reach what), reviewed twice a year?	[]	[]
11. Are default passwords changed on routers, NAS, cameras and IoT devices?	[]	[]
12. Do you know what customer personal data you store, where, and why?	[]	[]
13. Do your forms and records capture clear consent for the data collected?	[]	[]
14. Do you have a retention/deletion rule so old personal data is not kept fore...	[]	[]
15. Can your team detect and report a suspected breach the same day?	[]	[]
16. Is there a written incident checklist (who to call, what to preserve)?	[]	[]
17. Are laptops and company devices encrypted or passcode-protected?	[]	[]
18. Do joiners get access on day 1 and lose ALL access on their last day?	[]	[]
19. Are databases reachable only from your app/servers, not the public internet?	[]	[]
20. Has someone outside your day-to-day team reviewed your security in 12 months?	[]	[]

SCORING (count your Yes answers):

0-6 : Urgent gaps. Start here - do not postpone an assessment.

7-13 : Baseline exists, but real holes remain (backup, access, incident path).

14-20: Decent baseline - book a Professional review to validate and harden.

This checklist is a starting point, not an audit, certification or guarantee.
